Garmin Ltd. (NYSE: GRMN) has made a name for itself as a top player in GPS navigation and wearable tech across various markets. After diving deep into the numbers, I've come to the conclusion that it might be a good time to sell, setting a one-year target price of $139.77. That's about a 25% drop from where it's currently sitting at $186.83 as of April 1, 2025.

Investment Thesis

Even though Garmin has shown strong financial results in 2024 — with total revenue hitting $6.30 billion (a 20% jump from previous year) and record operating income of $1.59 billion (up 46%) — it seems like the stock is currently is higher than compared to its intrinsic value. Here's why I think so:

1. **Premium Pricing**: The stock is trading at a P/E ratio of 26.0x, which is well above its historical average and that of its competitors. This suggests that the market is expecting more than might be realistic.
2. **Growth Moderation**: While growth has been solid, especially in the Fitness (up 32% YoY) and Outdoor (up 16% YoY) sectors, I anticipate a slowdown in the next few years, with expectations of around 7.67% compounded annual revenue growth from 2025 to 2029.
3. **Competitive Pressures**: There's growing competition from big players like Apple and Samsung in the wearables market, which could start to eat into Garmin's market share and squeeze profit margins.
4. **Geopolitical Risk:** With about 73% of manufacturing happening in Taiwan, Garmin faces a lot of risk in its supply chain, especially given the increasing geopolitical tensions in that area.

Valuation Summary

After taking a closer look at the Discounted Cash Flow (DCF) model, I've determined that the intrinsic value sits at around $139.77 per share. This indicates that the stock might be a bit overpriced by roughly 25%. Here are some important insights we gathered:

- WACC: 9.70%, which reflects Garmin's funding structure—almost entirely equity at 99.6% with just a sliver of debt at 0.4%
- Terminal Growth Rate: 3.3%, based on expected GDP growth in the regions where they operate
- 5-Year Revenue CAGR: 7.67%, showing growth that's expected to ease from 11.3% in 2025 down to 4.8% in 2029
- Operating Margin: Expected to stabilize around 21.9% after some preliminary growth

When we run a sensitivity analysis changing WACC (from 7.7% to 11.7%) and terminal growth (ranging from 1.3% to 5.3%), we find the valuation could swing between $96.86 and $329.42, with our base case of $139.77 being a fair midpoint.

1. Company Background

Garmin Ltd. was founded in 1989 and is based in Schaffhausen, Switzerland. The company was launched as a mapper of GPS technologies for military uses during 1989 and has experienced substantial growth throughout its 35-year development. The company first earned its standing by developing GPS units for military aviation and marine applications and then released its automotive navigation device StreetPilot for consumers in 1998. The company maintains its primary operational headquarters in Olathe, Kansas, where significant research, development, and administrative functions are located. This facility employs over 5,700 associates and serves as a critical hub for Garmin's Americas operations.

2. Business Segments

Garmin operates through **five** distinct business segments, each targeting specific markets with specialized products:

1. **Fitness Segment**: Garmin offers a comprehensive range of fitness and activity tracking products that cater to various athletic pursuits and wellness monitoring. This segment has become increasingly important to Garmin's overall business, with the company leveraging its technological expertise to compete effectively in the wearable fitness market.
2. **Outdoor Segment**: This segment includes outdoor handhelds, wearable devices, golf devices, and dog tracking/training equipment. Garmin's adventure smartwatches, including the fēnix line introduced in 2012, have positioned the company as a leader in specialized outdoor recreation technology.
3. **Aviation Segment**: Garmin provides navigation solutions to aircraft manufacturers, existing aircraft owners and operators, as well as military and government customers. The company's aviation offerings span transport aircraft, business aviation, general aviation, experimental/light sport aircraft, helicopters, and unmanned aerial vehicles. This segment has its roots in Garmin's 1994 release of the GPS 155, the first IFR-certified aviation navigation system.
4. **Marine Segment**: The marine segment features navigation and communication products for boating enthusiasts and professionals. Notable innovations include the 2015 introduction of Panoptix, the first product to provide real-time live sonar for anglers, and the 2017 release of the Descent Mk1 dive computer with surface GPS capabilities.
5. **Auto Segment**: Garmin offers a range of automotive navigation products and applications designed for the mobile GPS market. The company's automotive history dates back to 1998 with the release of StreetPilot, Garmin's first portable navigation system for cars.

3. Market Performance and Financial Highlights

The strategic transformation of Garmin brought about outstanding financial outcomes. Garmin achieved $6.30 billion worth of consolidated revenue during fiscal year 2024 which represented a 20% rise over the previous year’s figures.

Combined revenue during the fourth quarter of 2024 exceeded $1.82 billion at a 23% increase since the previous year and operating income totaled $516 million representing a 52% growth. The gross margin of Garmin reached 59.3% during Q4 2024 which represented an increase from 58.3% in the corresponding quarter of the previous year and operating margin reached 28.3% compared to 23.0% during the same period.

The outdoor segment of the company now serves as a major revenue engine by registering 31% growth throughout Q3 and Q4 2024 because customers continue to buy wearable in large number.

4. Geographic Reach

Garmin operates globally with a presence in over 100 countries, but its revenue distribution shows concentration in certain regions. The company designs, develops, manufactures, markets, and distributes a range of wireless devices in the Americas, the Asia Pacific, Australian Continent, Europe, the Middle East, and Africa.

Americas: The Americas represent Garmin's largest geographical market, accounting for approximately **48% of total revenue**. Within this region:

- The United States serves as Garmin's primary market, contributing approximately 47% of total revenue
- Canada, Brazil, Mexico, and other Latin American countries comprise the remaining 4% of Americas revenue

Figure 9: 2024 Revenue by Segment (% of Total)

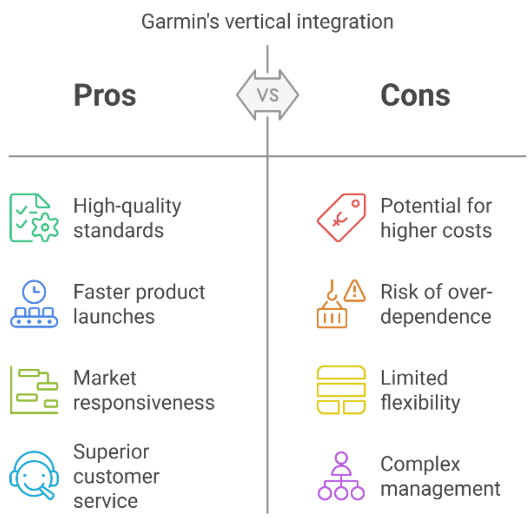
Figure 10: Garmin Revenue Worldwide from 2006 to 2023

Source: Statista

Figure 11: Garmin Company Strategy



Source: Company Website

Figure 12: Garmin inReach® Messenger Plus

Source: Company Website

Europe, Middle East, and Africa (EMEA): The EMEA region constitutes Garmin's second-largest market, representing approximately **37% of total revenue**. Garmin's European headquarters is located in Southampton, UK, which serves as a regional hub for sales, marketing, and support operations. The company's legal headquarters is in Schaffhausen, Switzerland, following its 2010 reincorporation. Key European markets include:

- United Kingdom
- Germany
- France
- Italy
- Spain

Asia-Pacific (APAC): The Asia-Pacific region accounts for approximately **15% of Garmin's total revenue**, with particularly strong performance in:

- Australia
- Japan
- China
- Taiwan
- South Korea

Garmin maintains significant manufacturing operations in Taiwan, where it produces many of its consumer electronic devices. This vertical integration strategy helps Garmin control quality, reduce costs, and respond quickly to market demands.

5. Company Vertical Integration Strategy

As a vertical integration business model company, Garmin maintains control over the complete production process starting with design and ending with distribution. This integrated approach enables Garmin to:

1. Maintain stringent quality control standards
2. Accelerate time-to-market for new products
3. The company has fast reaction capabilities for market requirements alongside technological improvements.
4. The company provides extraordinary customer assistance coupled with superior customer service.

The company generates money through its multiple direct sales approaches by managing revenue streams directly through online platforms and retail stores and authorized dealers. The after-sales services from Garmin such as map updates and software subscriptions and maintenance packages produce substantial income for the company.

6. Product Innovation Strategy

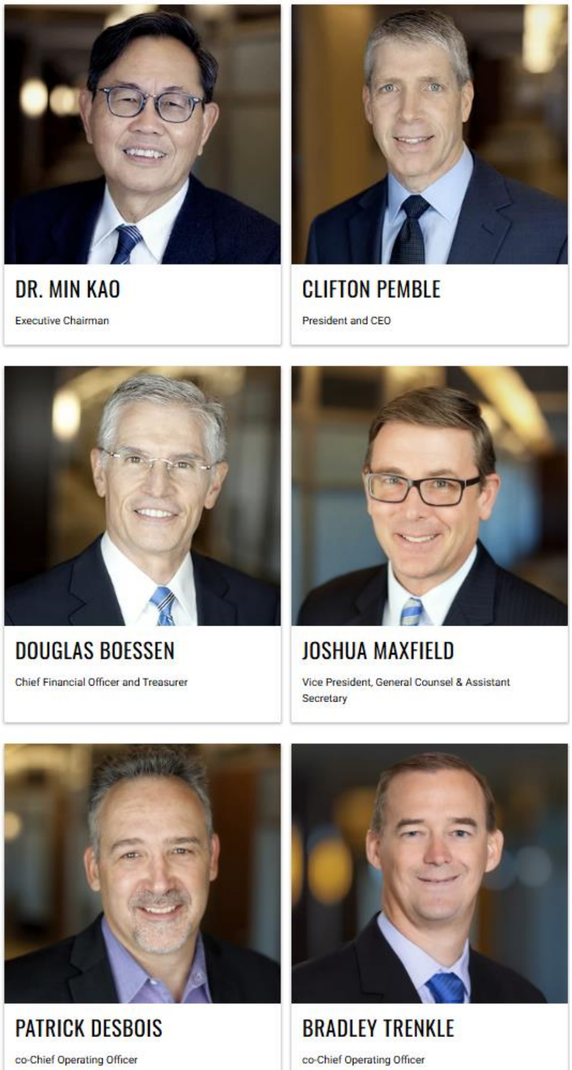
The success trajectory of Garmin happens because it directly ties to its active approach of both product innovation and product differentiation. The fēnix 8 series and Enduro 3 represent strategic new additions to the adventure watch lineup that offer advanced AMOLED displays as well as built-in speakers, microphones, and LED flashlights.

The company achieved product expansion through its specialized offerings consisting of the inReach® Messenger Plus (a breakthrough satellite communicator capable of photo and voice messaging capabilities) and the Approach R50 portable golf launch monitor and the Descent X50i dive computer. The new product developments indicate that Garmin continues to establish highly distinct features which appeal to targeted consumer groups.

The Garmin Coach segment received an upgrade from Garmin through new cyclist training plans beyond existing runner plans which helps users reach their fitness goals and event preparation objectives. The company introduced its Lily 2 Active as the smallest GPS-enabled smartwatch with an elegant design and extended battery duration.

3. Corporate Governance

Figure 13: Garmin Executive Team



Source: Company Website

Figure 14: Garmin Board Members

Source: Company Website

Corporate Governance Structure

The governance framework at Garmin establishes effective monitoring for the company alongside shareholder benefit maximization. The Board of Directors operates as the main governing authority through their roles in oversight of management and risk identification as well as governance practice verification. The Board uses three specific committees as specialized platforms to execute their oversight responsibilities:

- **Audit Committee:** Oversees internal accounting, financial reporting processes, and external audit functions. This committee maintains direct oversight of independent registered public accounting firm appointments as well as their supervision while also being responsible for directed legal compliance and risk management practice monitoring as assigned by the Board.
- **Compensation Committee:** Makes sure executive compensation programs motivate employees while effectively attracting and maintaining executives in their roles. The committee establishes salary levels for the Executive Chairman alongside the CEO and other executive officers but must follow relevant legal requirements.
- **Nominating and Corporate Governance Committee**: This committee fulfills a leadership role in both policy-making governance practices and director nominee selection. This committee performs assessments of new board members and directors together with a review of both existing structures and makes suggestions for board modifications.

Every committee member belongs to the independent director category solely to provide unclouded oversight to the company. The Board selects Compensation Committee members for annual shareholder election yet the positions of remaining members and chairs emerge from Nominating and Corporate Governance Committee recommendations to the Board.

Executive Team

- Dr. Min H. Kao has served as Executive Chairman of Garmin Ltd. since January 2013. Dr. Kao is one of Garmin's co-founders and previously served as Chairman from August 2004 to December 2012 and Co-Chairman from August 2000 to August 2004. He served as Chief Executive Officer from August 2002 to December 2012 and as Co-Chief Executive Officer from August 2000 to August 2002.
- Clifton A. Pemble has served as President and Chief Executive Officer of Garmin Ltd. since January 2013. He has also served as a director of Garmin Ltd. since August 2004. Since joining Garmin in October 1989 as a Software Engineer, he has held various other positions, including President and Chief Operating Officer, Vice President - Engineering and Director of Engineering. Mr. Pemble also serves as a director and officer of various Garmin subsidiaries.
- Douglas G. Boessen has served as Chief Financial Officer and Treasurer of Garmin Ltd. since joining Garmin in July 2014. Mr. Boessen also serves as a director and officer of various Garmin subsidiaries.
- Patrick G. Desbois has served as co-Chief Operating Officer of Garmin Ltd. since July 2024. He joined Garmin in November 2011 as Vice President, Executive Office and also served as Executive Vice President, Operations of Garmin International, Inc., a principal subsidiary of Garmin Ltd.
- Bradley C. Trenkle has served as co-Chief Operating Officer of Garmin Ltd. since July 2024. Since joining Garmin in 2002 as a Software Engineer, he has held various leadership positions at the Company, including Vice President, Outdoor Segment of Garmin International, Inc. Mr. Trenkle also serves as a director and officer of various Garmin subsidiaries.

Joshua H. Maxfield has served as Vice President, General Counsel and Assistant Secretary of Garmin Ltd. since July 2024. Since joining Garmin in August of 2006 as a Senior Staff Attorney, he has held various other positions, including Associate General Counsel-Corporate. Mr. Maxfield also serves as a director and officer of various Garmin subsidiaries.

Board Composition and Independence

The February 2024 Garmin's Board of Directors consists of Joseph J. Hartnett, Catherine A. Lewis, Charles W. Peffer, Jonathan C. Burrell, Min H. Kao, and Clifton A. Pemble who have achieved 40% female directorship above the Canadian board average and industry standards. The Board platform at Garmin follows independence standards along with diverse board member expertise to maintain effective governance.

- **Independence Requirements:** NYSE listing standards together with appropriate regulations dictate that the Board maintains directorship with independent members as its majority.

Source: PitchBook

Independent directorship receives an annual evaluation from the Nominating and Corporate Governance Committee.

- **Election Process:** Board Members along with the Chairman get elected through the annual General Meeting by shareholders according to the Company's Articles of Association for extended periods until the next Annual General Meeting.
- **Qualifications:** Every year Board candidate recommendations proceed from the Nominating and Corporate Governance Committee based on qualifications which prioritize company welfare along with shareholder interests.
- **Separation of Roles:** A strong governance system emerges from separating the positions of Chairman and CEO because it positions two executives to monitor each other independently. Dr. Dr. Min H. Kao maintains executive chairmanship at the company and President Clifton A. Pemble fulfills the role of CEO.

Executive Compensation Philosophy

The executive compensation philosophy at Garmin exists to unite management goals with shareholder value enhancement and it upholds market standard compensation levels.

- **Multi-component Structure:** Executive compensation at Garmin comprises base pay together with STIP and LTIP components which variable compensation amounts to 74% of total executive rewards for 2022.
- **Performance Linkage:** STIP and LTIP reward executives with performance-based compensation that uses adjusted EBITDA and annual absolute ROIC alongside relative total shareholder return as performance metrics which support the company's strategic approach.
- **Long-term Incentives:** Through compensation design Garmin establishes long-term performance targets that stimulate management to choose sustainable business growth options rather than immediate financial returns.

Shareholder Structure

The company's institutional ownership structure is substantial at approximately 60% among the top 20 investors, with Min-Hwan Kao (9.47%), The Vanguard Group (9.39%), and BlackRock (8.09%) as the largest stakeholders. Recent institutional movements show mixed activity, with BlackRock increasing its position by 4.50% while Artisan Partners reduced holdings significantly (-12.30%).

Insider ownership is notable, with Min-Hwan Kao, Co-Founder & Executive Chairman, holding the largest position (18.2M shares, 9.47%, $4.1B), followed by Jonathan C. Burrell, Independent Director (10.7M shares, 5.55%, $2.4B). Total insider holdings amount to 29.5M shares (15.35%, $6.6B), indicating strong alignment between management and shareholder interests. The CEO, Clifton Albert Pemble, holds 75.4K shares (0.04%).

Figure 22: Garmin earns No. 2 spot on Forbes' Best Large Employers list (2024)

Source: Boating Industry

Garmin has achieved an "A" MSCI ESG rating (upgraded from "BBB") and maintains a Medium Risk Sustainalytics score of 21.8, ranking 126th among 206 Consumer Durables companies. However, company is currently behind some competitors like FitBit (16.7) and Logitech (8.5). The Sustainalytics ESG Risk Rating measures Garmin's exposure to industry-specific material ESG risks and how well the company manages those risks. Garmin's exposure to ESG risks is categorized as "Medium," while its management of these risks is considered "Average". In the MSCI rating system, an "A" score places Garmin in the "Average" category (A, BBB, BB), between "Leaders" (AAA, AA) and "Laggards" (B, CCC).

Environmental

In 2023, Garmin reduced our emissions by more than 26,000 metric tons of CO_2e by using renewable energy. However, it is still ranked in the 4th quartile in the MSCI ESG Rating, possessing only a 0.80 Environmental score. The company initiated numerous environmental programs to handle the ecological influence from their operations because they understand its importance.

- **Fleet Modernization:** The company achieves fleet efficiency and optimization programs to achieve lower greenhouse gas emissions. Garmin uses the Fleet Efficiency and Optimization Program together with the Aircraft Maintenance and Load Control Program to minimize pollutants that release from their fleet during non-customer flight times.
- **Carbon Capture and Offsetting:** Garmin belongs to the Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA) and executes emission monitoring and reporting while making carbon offset purchases. When smaller Carbon Capture Utilization and Storage technology devices become available the company will integrate them into their operations for residual emission capture.
- **Sustainable Aviation Fuel:** The Canadian Council for Sustainable Aviation Fuels (C-SAF) has Garmin as a founding member to speed up the development and commercialization of low-carbon Sustainable Aviation Fuel (SAF).

Social

Garmin currently employs more than 19,900 associates in 30+ countries. In 2023, the company raised more than $2.75 million for United Way and partnering community organizations. The social responsibility efforts of Garmin concentrate on three main areas which include workforce development initiatives and diversity promotion alongside community engagement activities.

- **Workplace Health & Safety:** All Garmin team members must complete the required health and safety training both when they join the company and when they repeat the training session three years later. The company delivers a Non-Punitive Safety Reporting system together with an Employee Assistance Program and a whistleblower program to promote the safety and well-being of staff members.
- **Employee Satisfaction:** The employee satisfaction levels at Garmin surpass those of industry competitors because CEO approval reaches 88% and company recommendation reaches 84%.
- **Workforce Diversity:** The organization reveals information about their workforce structure through diversity statistics that show 16% female staff and 27% visible minority employees along with 2.1% persons with disabilities. Garmin stands out from its competitors by having increased workforce diversity in its male-dominated aerospace operations since less than 6% of all pilots worldwide identify as women.
- **Workforce Inclusion:** The organization, through its Business Resource Groups (BRG), ecourage minority communities to get along and express their beliefs in groups such as the Women's Business Forum, Juntos, and the Black Enterprise clubs.

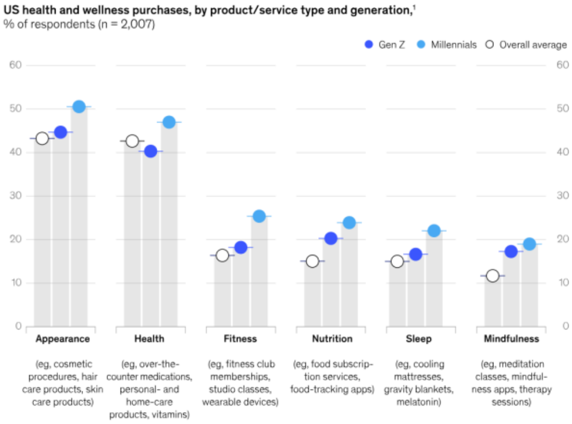
Governance

In 2024, Garmin was recognized as #2 on the Forbes' list of America's Best Large Employers. The company Corporate Governance Guidelines establish a framework for effective governance that serves the best interests of the company and its shareholders. These guidelines, which were amended and restated on December 7, 2021, provide a comprehensive structure for the Board's responsibilities and operations.

- **Board Diversity:** Garmin's Board currently holds 40% female members and exceeds the female composition of other Canadian boards as well as national airline sector boards.
- **Shareholder Ownership:** Institutional investors together with passive mutual funds are the dominant shareholders of Garmin. Garmin expects no major negative influence from its shareholders who hold limited control over corporate decision making.
- **Management Experience:** The management team of Garmin consists of accomplished staff members who have accumulated multiple decades of experience in their respective industries and executive experience before joining the company. The company maintains a strong position to carry out strategic opportunities and business initiatives because of this approach.

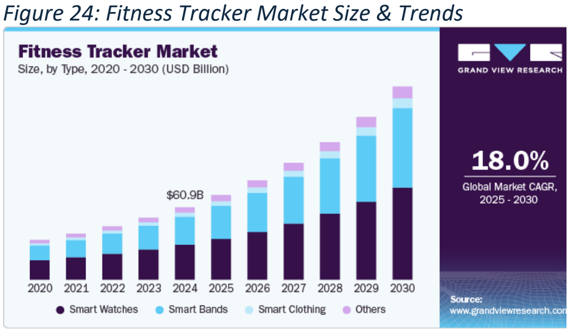
5. Industry Overview and Competitive Positioning

Figure 23: Millennial and Gen Z consumers are spending more on health and wellness



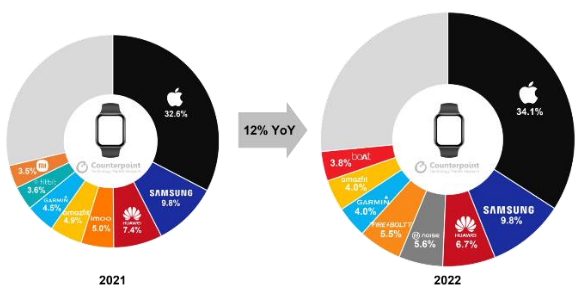
Source: McKinsey

Figure 24: Fitness Tracker Market Size & Trends



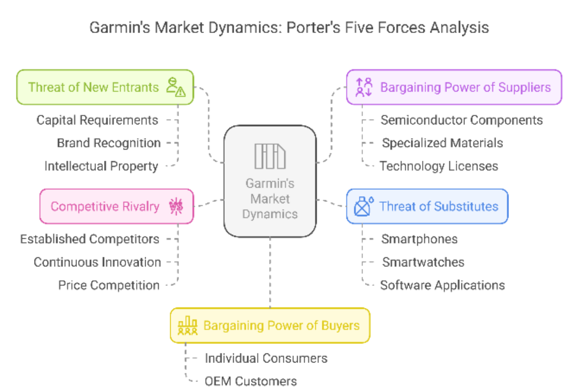
Source: GrandViewResearch

Figure 25: Garmin global market share falls 5% points from 2021 to 2022



Source: The5kRunner

Figure 26: Porter's Five Forces



Key Drivers & Success Factors

Multiple critical forces in the operating environment of Garmin produce long-term growth potential as the company is diversified into 5 different segments. Some of the opportunity trends are:

- **Technological Innovation**: Organizations which allocate considerable research funding along with successful implementation of modern technologies preserve their market leadership role. Garmin achieves market leadership within its five business segments by investing 9-10% of its annual revenue in R&D consistent allocations.
- **Health & Wellness Trends**: The COVID-19 pandemic caused market demand for health monitoring and performance tracking devices to rise steadily thus ensuring long-term customer need for these devices. According to McKinsey, Millennials and Gen Z consumers are spending more on Fitness products which translated to the fitness segment of Garmin has seen significant growth at 32% between 2023 and 2024 due to rising fitness trends worldwide. The segment is expected to see a Global Market CAGR of 18% from 2025 to 2030.
- **Market Expansion Opportunities**: Premium GPS and wearable devices show substantial market expansion possibilities because emerging economies demonstrate insufficient market penetration in these devices. The Asia-Pacific region shows the strongest market growth potential, yet Garmin continues to operate its core business in North America and Europe.
- **Sustained Consumer Demand:** Inflationary times have created spending doubts yet the market demand for luxury wearable technology stays strong. Reverberating market trends demonstrate Garmin's financial success in 2024 because they recorded a 20% growth in consolidated revenue that stretched to $6.3 billion which exceeded total industry expansion numbers. This resilience likely stems from the increasing integration of wearable technology into daily consumer routines and lifestyle management.
- **Competitive Intensity:** All wearables' segments experience rising market competition because technology leaders such as Apple and Samsung enter the market, but specialized companies focus on distinct market segments. The premium smartwatch category (devices over $500) maintains Garmin as the leading company while the company holds the fifth position for global sales of overall smartwatches.

Fitness Wearable Competitors

The fitness segment has turned out to be Garmin's biggest growth driver, making up 29% of total revenue in 2024 and boasting an impressive 32% year-over-year growth rate. Garmin leads the pack when it comes to specialized fitness gadgets for activities like running, cycling, and swimming, but it's seeing more competition from big names like Apple, Samsung, and Fitbit in the general smartwatch market. Here are the main competitors tha Garmin has in the space:

le: They pretty much dominate the high-end smartwatch market with the Apple Watch, which egrates perfectly with iOS. However, it's not necessarily built for in-depth fitness tracking.

nsung: A key player in the Android space with their Galaxy Watch series.

it (Google): Aimed at the mainstream audience with good fitness tracking at a fair price.

cialized Brands: Names like Polar, Suunto, Wahoo Fitness, and Coros focus on specific sports and ivities with their devices.

Garmin stands out by offering longer battery life, advanced training metrics, and durable designs that attract serious athletes and outdoor lovers. While Apple and Samsung may lead in the all-purpose smartwatch category, Garmin remains a frontrunner in specialized fitness devices, particularly for running, cycling, and swimming.

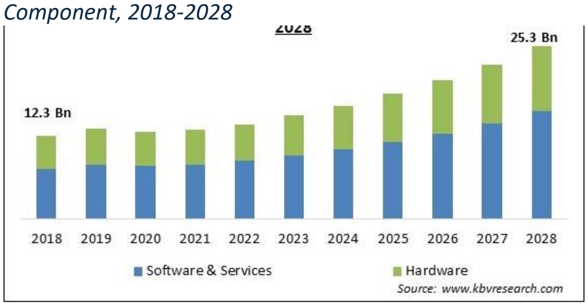
Outdoor Equipment Competitors

Outdoor Segment: Garmin's outdoor segment has shown strong growth too, increasing by 29% year-over-year in Q4 of 2024. This segment includes adventure watches, handheld navigation devices, and specialized products for activities like hunting, hiking, and golf. Thanks to Garmin's reputation for toughness and reliability in tough conditions, the company manages to stay premium priced even with competition from dedicated outdoor gear manufacturers. In the outdoor recreation market, Garmin goes up against both traditional gear manufacturers and tech-savvy companies:

- **Casio**: They're a strong competitor with their rugged G-Shock watches.
- **Suunto**: Known for adventure watches and diving computers.
- **Specialized Brands:** Companies like Shearwater Research (for diving) and Dogtra, SportDOG (for dog tracking).

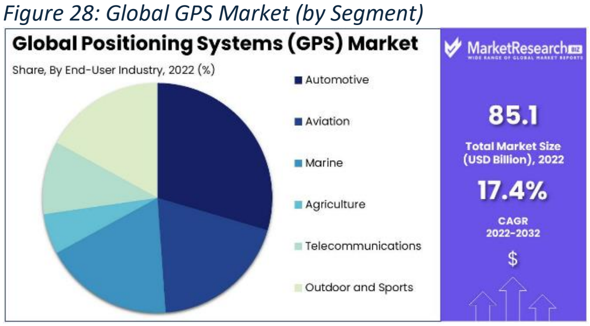
Garmin's edge comes from a wide range of outdoor products, impressive battery life, and devices customized for activities like hunting, hiking, and fishing.

Figure 27: GPS Navigation System Market Size, By Component, 2018-2028



Source: KBVR Research

Figure 28: Global GPS Market (by Segment)



Source: Market Research

GPS Navigation Competitors

Although the GPS market has matured with smartphones dominating navigation and growth potential primarily driven by software components, Garmin has remained relevant by providing specialized applications and integrating its products across different market segments.

- **Auto OEM Segment:** While Garmin used to be all about consumer automotive GPS devices, they've made a smart shift toward working with OEM partners. Now, they provide infotainment systems, navigation technology, cameras, and advanced driver assistance features to top car makers like BMW, Mercedes-Benz, Honda, and Toyota.
- **Aviation Segment:** Garmin has a strong foothold in the aviation world, thanks in part to tough certification and safety standards that keep competitors at bay. They offer a variety of integrated flight decks, electronic displays, navigation systems, and communication tools customized for general and business aviation, and helicopters. They've also branched out into new aviation areas, such as commercial air carriers, military defense, electric aircraft, and Advanced Air Mobility/eVTOL.
- **Marine Segment:** Garmin has been outshining the overall marine market by using its navigation know-how to create chart plotters, fish finders, radar systems, and all-in-one marine technologies. Their smart acquisitions, like Fusion Electronics for marine audio, have really boosted their offerings for boat manufacturers and recreational users alike.

Garmin's key competitors in the GPS space include:

- **TomTom:** A important contender in automotive navigation
- **Magellan:** Focuses on GPS for outdoor and recreational use
- Various regional companies that operate in specific niches

Source: Excel DCF Model

The valuation assessment of Garmin was conducted using a Free Cash Flow to the Firm (FCFF) 5-year Discounted Cash Flow (DCF) model, supplemented by relative valuation through key financial multiples. This approach incorporates the company's ongoing business transformation, margin expansion initiatives, and the expected impact of management restructuring on long-term growth.

Revenue Growth (Base Case)

Garmin's revenue comes from five main areas: Fitness, Outdoor, Aviation, Marine, and Auto. In our base case, we see an expected CAGR of about 7.67% from 2025 to 2029. The projected revenue growth looks strong at first, then gradually slows down:

- 2025: $7,009 million (11.3% growth)
- 2026: $7,649 million (9.1% growth)
- 2027: $8,212 million (7.4% growth)
- 2028: $8,699 million (5.9% growth)
- 2029: $9,114 million (4.8% growth)

The Fitness and Outdoor segments are the biggest drivers of this growth, making up around 60% of total revenue during this period. Meanwhile, the Aviation, Marine, and Auto segments add steady income with more moderate growth expectations.

WACC

We estimate Garmin's weighted average cost of capital (WACC) to be around 9.70%. This figure gives us a good sense of the company's capital structure and the level of risk involved:

t of Debt: This is calculated by taking the corporate spread implied by the company's debt rating and ling it to the risk-free rate, making some adjustments for expected increases in target use.

t of Equity: We arrive at this using the Capital Asset Pricing Model (CAPM), which considers the owing factors:

Risk-free rate of 4.33% (based on the yield of a 10-year U.S. government bond)

A market risk premium that leads to an expected market return of 9.67%

Levered beta of 1.01 (which we estimate by looking at 5-year returns compared to the S&P 500)

As of April 2025, Garmin's capital structure heavily emphasizes equity, with debt making up only 0.4% of the total capitalization (about $163 million) while equity stands at a major 99.6% (around $36,514 million).

Figure 32: Terminal Growth Rate (Weighted by Region GDP)

Region	Revenue Weight	GDP Growth
Americas:	50.0%	3.0%
Europe, Middle East, and Africa (EMEA):	30.0%	2.2%
Asia-Pacific (APAC):	20.0%	5.7%

Source: Excel DCF Model

Terminal Value Assumptions

Looking ahead to the years after 2029, I've set a terminal growth rate of 3.3%. I came up with this figure by considering Garmin's revenue distribution across different regions and their expected GDP growth:

- Americas (50% share): 3.0% GDP growth
- Europe, Middle East, and Africa (30% share): 2.2% GDP growth
- Asia-Pacific (20% share): 5.7% GDP growth

This method helps us anticipate steady demand for Garmin's product lines, their ability to set prices, and the ongoing growth in emerging markets, especially in the Asia-Pacific region.

Forecasted FCFF

The company's unlevered free cash flow is on a steady rise from 2025 to 2029:

- 2025F: $1,620 million
- 2026F: $1,577 million
- 2027F: $1,654 million
- 2028F: $1,708 million
- 2029F: $1,776 million

This translates to a compound annual growth rate (CAGR) of about 2.3% over the forecast period. There's a slight dip in 2026, from $1,620 million to $1,577 million, likely due to increased working capital needs (with a $388 million shift in net working capital) and higher tax payments. However, the company quickly gets back on track and continues to grow in the following years.

Terminal Value Calculation

In 2029, the calculation for the terminal value comes out to about $28.7 billion. This figure represents the present value of all cash flows we expect to receive after our detailed forecast period ends. We've used the perpetuity growth approach, applying a terminal growth rate of 3.3%. This rate aligns well with the anticipated GDP growth in the regions where the company operates globally.

Intrinsic Value Assessment

Our DCF analysis shows there's quite a difference between what the market thinks the company's worth and what the numbers suggest:

- Enterprise Value (Market): $34,031 million
- Enterprise Value (Intrinsic): $24,976 million
- Difference: $9,055 million (26.6% higher)

Looking at it on a per-share basis:

- Current Market Price: $186.83
- Calculated Intrinsic Value: $139.77
- Implied Overvaluation: $47.06 (33.7%)

This gap tells us that the market might be expecting better growth or assessing the risks as lower than what our baseline scenario suggests. When we calculate the present value of future cash flows ($6,485 million) and add the discounted terminal value ($18,491 million), we get a total enterprise value of $24,976 million. After we take into account the debt ($163 million) and cash ($2,079 million), the final equity value comes to $26,892 million, which means about $139.77 shar

Comparable Companies Analysis

To check our DCF valuation, we did a relative valuation using a group of similar companies like Brunswick Corporation, Cadence Design Systems, Johnson Outdoors, Logitech International, Nikon Corporation, Panasonic Holdings, and Sportradar Group. Here's what we found when we compared key multiples:

- P/E (trailing): The average among our peers is 53.47x
- P/E (forward): The average here is 29.59x
- EV/EBITDA: Peers show an average of 28.97x
- P/S: The average for this group is 0.96x
- P/B: Peers average around 0.85x

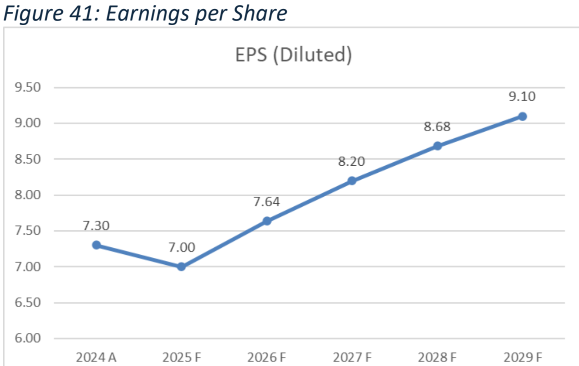
Figure 41: Earnings per Share



Source: Excel DCF Model

Liquidity and Safety

Garmin has a solid handle on its finances, consistently showing strong liquidity metrics. Throughout the forecast period, its current ratio stays above 3.0, peaking at 3.15 in 2025 and climbing to 3.76 by 2029. The quick ratio is also impressively above 2.0, which means the company can easily take care of short-term obligations without needing to sell off inventory. Their accounts receivable turnover has leveled off around 6.85, and the days receivable are stable at roughly 53 days, emphasizing their effective collection practices.

Productivity and Efficiency

Garmin's inventory turnover ratio is expected to hold steady at about 1.62x, with inventory sitting around 225 days. While that might sound a bit high in comparison to some other industries, it actually works well for Garmin. They need to keep enough specialized electronic gear on hand to meet customer demand. Total asset turnover should stay consistent at around 0.63-0.67x, but fixed asset turnover is on the upswing, projected to jump from 4.41x to 5.91x by 2029. This points to better use of their production facilities and equipment.

Profitability

Operating profit margins are likely to stabilize at around 21.9% after 2025, following some ups and downs in the earlier years. The return on assets (ROA) is expected to remain strong at approximately 12.5%, and the return on sales (net profit margin) should stay steady at about 19.3%. However, return on equity (ROE) is forecasted to gradually dip from 17.99% to 15.07% by 2029, mainly because Garmin keeps a conservative financial structure with very little debt. Return on invested capital (ROIC) shows a similar trend, also decreasing slightly from 17.99% to 15.07%.

Solvency and Leverage

Garmin has a very cautious financial structure, keeping its debt ratio below 21% throughout the forecast period. The asset-to-equity multiplier stays stable at around 1.25x, which means they use minimal financial use. Their ratio of current liabilities to total debt is above 86%, showing the company's preference for short-term operational liabilities instead of long-term debt. Notably, Garmin has zero interest-bearing debt, which means there's no interest coverage ratio to worry about—eliminating any financial stress related to debt servicing.

DuPont Analysis (ROE Breakdown)

The DuPont analysis shows that Garmin's ROE is mainly driven by a solid net profit margin (19.3%), not so much by asset turnover (0.63-0.67x) or financial use (with an asset-to-equity ratio of 1.0x). This indicates that Garmin's profitability comes from being really good at operations rather than from aggressive asset use or financial tricks.

Dividend and Price Metrics

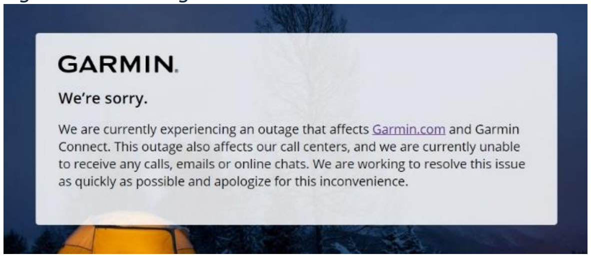
Earnings per share (EPS) is projected to rise from $5.60 in 2023 to $9.10 by 2029, which is a strong growth trend. The dividend per share is also expected to increase, moving from $2.54 to $3.64 in that time frame, while keeping a consistent payout ratio of around 40%. This reflects management's commitment to returning value to shareholders while also retaining enough capital for future growth plans.

Margins and Growth

Revenue growth is anticipated to moderate from the high levels seen in 2023-2024 to a more manageable 4-5% by 2029. Meanwhile, gross margins are impressively strong at 58%, which is well above industry averages, displaying Garmin's premium positioning and pricing power. Their R&D spending remains steady at around 17% of sales, emphasizing the company's dedication to innovation and new product development. EBITDA margins are expected to settle around 24%, with the effective tax rate normalizing at 17%.

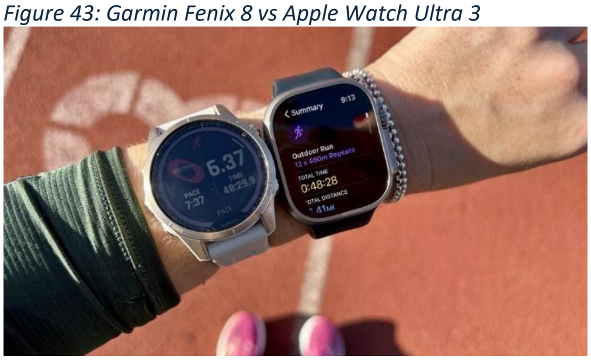
8. Investment Risks

Figure 42: Garming WastedLocker ransomware attack



Source: Bleeping Computer

Figure 43: Garmin Fenix 8 vs Apple Watch Ultra 3



Source: Google Image

Figure 44: Garmin Manufacturing operations in Taiwan

Source: Company's Website

Figure 45: Risk Assessment Matrix

Risk Category	Probability	Impact	Trend
Geopolitical (Taiwan)	Medium	High	Increasing
Cybersecurity	High	Medium	Increasing
Market Saturation	High	Medium	Stable
Regulatory Compliance	High	Medium	Increasing
Competitive Disruption	Medium	High	Increasing
Supply Chain Vulnerability	Medium	Medium	Stable

Geopolitical Vulnerabilities

Garmin's manufacturing setup makes it really susceptible to geopolitical issues, with a hefty 73% of its production coming from Taiwan. According to their 2024 10-K filing, they determine "military conflict between Taiwan and the PRC" as a serious risk that could bring production to a standstill for a long time. This risk is heightened by their reliance on single-source suppliers for important parts, like AMOLED displays, with Samsung Display supplying 68% of Garmin's wearable display needs.

Cybersecurity and Data Integrity Challenges

Even though Garmin has rolled out NIST-aligned protocols, they're still at risk from advanced cyber threats. The 2020 WastedLocker ransomware attack managed to encrypt essential aviation navigation databases and fitness tracking systems, leading to a hefty $10 million payment made through third-party negotiators. Now, while the 2025 10-K notes some improvements like more frequent encrypted backups and AI-driven anomaly detection, penetration tests still showed a 23% increase in zero-day vulnerabilities compared to 2023.

The addition of generative AI in their Unified Cabin 2025 automotive systems opens up new security holes, with researchers flagging potential voice command spoofing risks in their beta versions. As Garmin keeps making their products more connected and reliant on data, these cybersecurity issues could really disrupt operations and hurt their reputation.

Market Saturation and Financial Pressures

An analysis by Morgan Stanley anticipates a major slowdown in Garmin's wearable revenue growth for 2025, dropping from 31% to just 15.5% as the $70 billion market starts to mature. Gross margins are expected to take a hit, with a compression of 100-150 basis points due to:

- The rise of basic fitness trackers making it harder to stand out
- Increased costs for components, especially multi-band GPS chipsets
- Inventory write-downs caused by aging aviation avionics stock

Currently, the stock's P/E ratio stands at 26, which is considerably above the five-year average, making it susceptible to correction pressures. This high valuation doesn't leave much wiggle room for any slip-ups in an increasingly competitive field.

Technological Disruption and Competitive Dynamics

Apple's upcoming Watch Ultra 3 poses a serious challenge to Garmin's high-end adventure watch market with:

- Better health sensor integration, combining blood glucose monitoring with SpO2 levels
- Smooth iPhone integration, winning over 72% of new smartwatch buyers
- Carrier-subsidized pricing that undercuts the fēnix 8 by 22%

In the aviation sector, Honeywell's Anthem flight deck uses advanced encryption and machine learning for terrain avoidance, putting pressure on Garmin's G5000. What's more, Garmin's R&D spending, which sits at 14.2%, is lagging behind the average of 18.4% among its competitors, creating potential gaps in key features across their product lines.

Reputational and Supply Chain Risks

The 2025 IBBI Supplier of the Year award emphasizes Garmin's marine segment's reliance on Just-In-Time (JIT) delivery. For instance, a single earthquake in Taiwan in March 2025 caused shipments of the GPSMAP 8600 to be delayed by two weeks. Also, around 2.7% of automotive OEM production in 2024 was affected by counterfeit components from unauthorized suppliers, triggering a hefty $47 million recall. What's more, analysis of social media feedback indicates a 19% rise in negative sentiment regarding the stability of firmware updates following the rollout of Connect IQ 4.0.

Strategic Mitigation Effort

Garmin has put together a solid risk management plan that focuses on three main strategies:

- **Dual-Source Manufacturing:** They're working to boost their Polish facility to take on 35% of fitness product production by 2026.
- **Blockchain Supply Chain**: They've launched a pilot program with 22 key suppliers, achieving an impressive 99.8% traceability for components.
- **Cybersecurity Insurance**: They've secured $500 million worth of coverage with Chubb, which even covers state-sponsored attacks.

With these initiatives, Garmin aims to cut down on geopolitical risks by 40% and speed up breach response times by 58% from 2025 to 2027.
